- BiophytextTM - Is a synergistic complex of yeast and several botanical extracts rich in saponosides and flavonoids. It strengthens capillaries, reinforcing their resistance and reactivates microcirculation.
- Eyeseryl[®] - Is a tetrapeptide offering anti-edema properties, making it effective in reducing puffy eyebags.

- Hilurlip™ - Redefines, plumps and minimizes fine vertical lines of the lips. Small particles of Sodium Hyaluronate are processed to enhance penetration and efficacy, producing a long-term volume boosting effect on the lips and an anti-aging action on the thin tissue. It also acts against the effects of outside pollution. Hilurlip™ is an oil suspension containing particles of Sodium Hyaluronate, submitted to a technological process after which the particle size is reduced and homogenised to enhance penetration and efficacy.

- Ultra Filling Spheres™ - Is a technology based on the ability of dehydrated and cross-linked spheres to penetrate the upper layers of the epidermis and to absorb the water that evaporates from the deep dermis.

Thanks to their hygroscopic properties, the spheres volume increases rapidly, tightening skin and smoothing out wrinkles, leaving an elastic skin surface with long lasting hydration.
